# RL in Real World Robotics task training

**Team 6**George Muhn, Kylel Scott, Jacob Sindorf

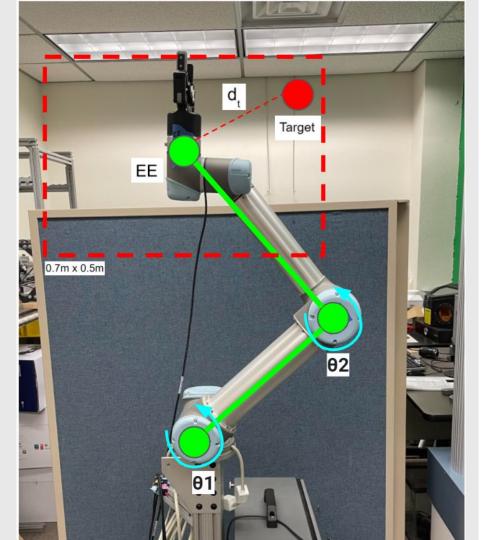

#### **Problem Statement**

Many real world robotics tasks require complex and detailed calculations in order to accomplish the simplests of tasks. When a robot is successful in these tasks it is solely limited to that specific task. Through reinforcement learning, Robotic tasks such as reaching can be trained and applied to real world robots such as the UR5 to reduce the need for rigorous math and control loops. However, poor documentation and extensive software dependencies hinder the replicability of such projects.

# **UR5 Reinforcement Learning Setup**

#### **Configuration**

Action (At  $\in$  A)

$$\theta(\text{dot})(1,2) \in [-0.3, +0.3]$$

State/Observation

 $\theta$ ,  $\theta$ (dot), At-1, dt

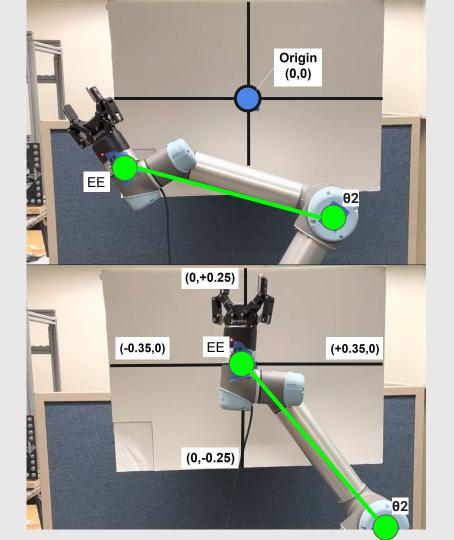

Reward (Rt  $\in$  R)

$$Rt = -dt + \exp(-100d2t)$$

**State Dynamics** 

$$egin{split} rac{\partial L}{\partial q^i}(t,oldsymbol{q}(t),\dot{oldsymbol{q}}(t)) - rac{\mathrm{d}}{\mathrm{d}t}rac{\partial L}{\partial \dot{q}^i}(t,oldsymbol{q}(t),\dot{oldsymbol{q}}(t)) = 0, \ i = 1,\ldots,n. \end{split}$$

Values and info from (1)

### Configuration

Boundary

0.7m by 0.5m, with origin (0,0) in center of the rectangle

**Episodes** 

Start at origin, random target, 4 seconds, reset to Origin

Values and info from (1)

# **Software Setup**

- Ubuntu 64 bit (16.04,20.04)
  - Virtual Machine (VirtualBox)
- Python3.7, Tensorflow 1.15
- Github: OpenAl Baselines, SenseAct,
  SenseActExperiments\*
  - Docker\*
- UR5 v 3.3.4.310

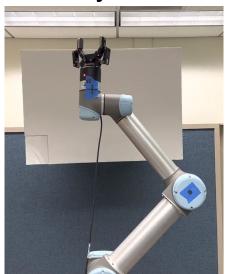

# **Hardware Setup**

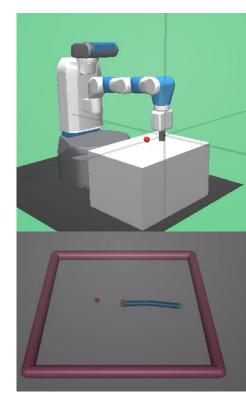

### Physical (Our Project) vs Virtual Environment

- Ethernet connection
- IP address dependant

#### Physical

#### Virtual

OpenAi FetchReach (3) and Reacher (4)

## **TRPO and PPO**

#### **Trust Region Policy Optimization (TRPO)**

$$\underset{\theta}{\text{maximize}} \, \mathbb{E}_{s \sim \rho_{\theta_{\text{old}}}, a \sim q} \left[ \frac{\pi_{\theta}(a|s)}{q(a|s)} Q_{\theta_{\text{old}}}(s, a) \right] \text{ subject to } \mathbb{E}_{s \sim \rho_{\theta_{\text{old}}}} \left[ D_{\text{KL}} (\pi_{\theta_{\text{old}}}(\cdot|s) \parallel \pi_{\theta}(\cdot|s)) \right] \leq \delta.$$

#### **Proximal Policy Optimization (PPO)**

$$L_{\theta}^{CLIP} = \mathbb{E}_{s,a \sim \pi_{\theta_{\text{old}}}} \left[ \min(r_{\theta}(a|s) A_{\theta_{\text{old}}}(a,s), \text{clip}(r_{\theta}(a|s), 1 - \varepsilon, 1 + \varepsilon) A_{\theta_{\text{old}}}(s,a)) \right],$$

# **Running Experiments**

- IP address required
- Hyperparameters
  - Can easily change
- Run train.py
- Each full experiment takes2.5 hours with no failure

| TRPO |                   |                  |                |               |              |          |           |               |  |  |  |  |
|------|-------------------|------------------|----------------|---------------|--------------|----------|-----------|---------------|--|--|--|--|
| #    | Average<br>Return | Hidden<br>Layers | Hidden<br>Size | Batch<br>Size | Step<br>Size | $\gamma$ | $\lambda$ | $\delta_{KL}$ |  |  |  |  |
| 1    | 158.56            | 2                | 64             | 4096          | 0.00472      | 0.96833  | 0.99874   | 0.02437       |  |  |  |  |

| 3   | 137.92            | 1                | 2048           | 512           | 0.00011      | 0.99402  | 0.90185   | 8                     |  |  |
| 4   | 137.26            | 4                | 32             | 2048          | 0.00163      | 0.96801  | 0.96893   | 1024                  |  |  |
| 5   | 136.09            | 1                | 128            | 2048          | 0.00280      | 0.99924  | 0.99003   | 32                    |  |  |

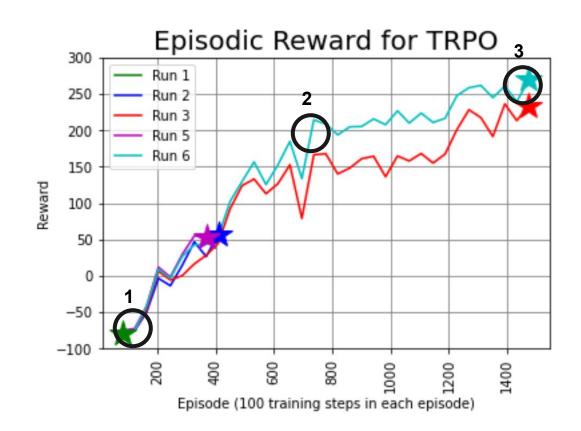

Table 4: **Hyper-parameter configurations found by random search:** The table presents the top-5 configurations found for PPO in [8].

Appendix A3 from (2). Hyperparameters are not given in (1), however Lynnerup experimented and documented the top 5 for PPO and TRPO

# **Results and Comparison**

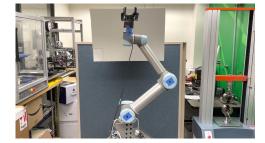

# **TRPO**

#### TRPO Reward = -70, Timestep = 5000

TRPO Reward = 200, Timestep = 77000

**TRPO Reward = 257, Timestep = 150000** 

3

# PPO

#### **PPO Reward = -50, Timestep = 17000**

**PPO Reward = 70, Timestep = 75000** 

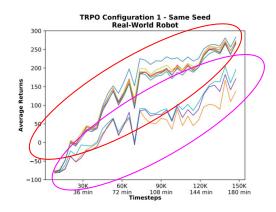

**PPO Reward = 180, Timestep = 148000** 

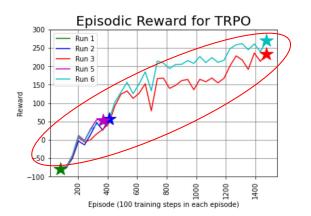

3

## **Results Comparison**

Figure 2 from (2). Using TRPO

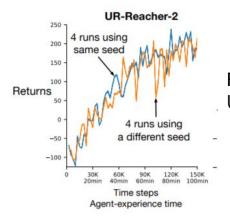

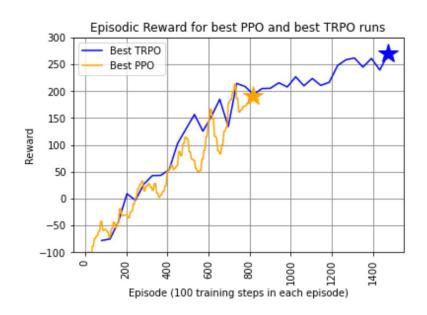

Figure 2 from (1). Using TRPO

# **Results Comparison**

#### **UR-Reacher-2**

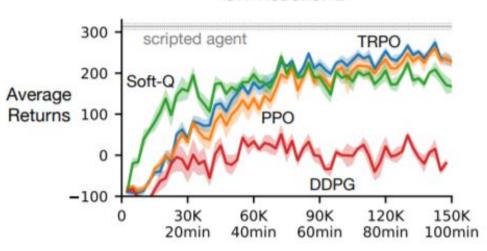

Figure 6 from (1) (states 'best hyperparameters' used, but these are never given)

## **Discussion and Conclusion**

## **Discussion and Conclusion**

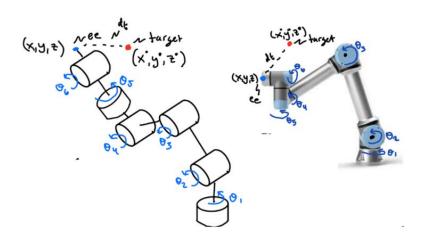

- Software dependencies and documentation
- virtual vs physical environment
- Communication and failed runs

- Replicated Results
- Easy to run once started

# **Next Steps**

- Another PPO run
- New Hyperparameters
- 6 DOF

#### 6 Actuators (3D)
